## DISHWASHER FACTS

Stainless steel, white-on-white and black dominate the color scene in new dishwashers. Consumers can choose from many models offering a wide variety of new features. These include convection drying, water heating boosters which can reach high temperatures and water towers with spray patterns which insure that every dish is clean. Advanced water filtering systems insure that food particles are not re-deposited on dishes once the wash cycle has started. Manufacturers have also focused on reducing noise levels with improved insulation and delayed start options.

Visit our "Who Makes What" section for more information about dishwashers.
