CLEAN-UP YOUR AIR WITH A ROOM AIR CLEANER

Had a sore throat lately? How about red and scratchy eyes? Headaches? Sneezing? It could be from tobacco smoke, dust, pollen, or animal dander floating around inside your home. What should you do? Step one, see your doctor and make sure you don't have a medical problem. Step two, purchase a new room air cleaner. Click on our "Who Makes What" section or visit www.cadr.org to find more information about air cleaners.

To help consumers choose an air cleaner, AHAM has developed the Clean Air Delivery Rate (CADR) Seal program. The program helps you decide which air cleaner to buy by rating each according to the amount of clean air the product will deliver per minute in cubic feet. Ratings are shown on the seal for tobacco smoke, dust and pollen, along with appropriate room sizes. CADR-rated room air cleaners can remove tobacco smoke particles as small as one-tenth of a micron, and dust and pollen particles much smaller than one micron.

Look for the CADR seal whether you suffer from allergies or asthma, are concerned for the air your children are breathing, or simply want better air quality for yourself. CADR can help you make the best choice for conditions in your home and the size of the room.

Testing and verification for the AHAM Room Air Cleaner Certification program are provided by an independent testing laboratory. For more information about the CADR program: www.cadr.org
